📝 **Guide to Prompting the Sentiment-Aligned AI Writer**

This application detects the sentiment (emotion) of your prompt and generates a creative paragraph written in that *exact* tone. To get the best results, your prompt must contain strong, clear emotional keywords.

Core Strategy

The AI system is composed of two parts:

1. **Sentiment Classifier:** Reads your prompt and labels it as POSITIVE, NEGATIVE, or NEUTRAL.

2. **Text Generator:** Takes the assigned label (e.g., NEGATIVE) and a system instruction (e.g., "Write a melancholic paragraph") and combines it with your topic.

To succeed, ensure the tone of your prompt matches the tone you want in the output.

1. To Get a POSITIVE / Uplifting Paragraph

Your prompt should contain clear, optimistic, or joyful adjectives and nouns.

Focus	Example Prompt	Expected Tone
Joy & Success	Describe the **exhilarating** feeling of reaching a **hard-won** goal.	Celebratory, enthusiastic, and bright.
Beauty & Hope	A **vibrant, promising** rainbow appears over a **peaceful** spring meadow.	Serene, hopeful, and full of light imagery.
Comfort & Warmth	The **perfect** moment of drinking **hot cocoa** by a **cozy** fireplace.	Content, comfortable, and gentle.

2. To Get a NEGATIVE / Melancholic Paragraph

Your prompt should contain words indicating sadness, difficulty, danger, or deep disappointment.

Focus	Example Prompt	Expected Tone
Sadness & Loss	The **crushing** realization of a **permanent, painful** goodbye.	Melancholy, heavy, and focused on sorrow.
Tension & Fear	A **dark, abandoned** house creaking in a **violent** thunderstorm.	Ominous, tense, and unnerving.

| Criticism & Anger | Reflect on the **frustrating, endless cycle** of missed opportunities. | Critical, distressed, or sharply disappointed. |
